

Milestone Project - HTML

PART 1

In this challenge, we want to test your knowledge of all you have learned so far in **HTML** lessons. Getting to structure your webpage and use all the elements covered so far, from headings, paragraphs, forms e.t.c.

Starting Point

First grab the mockup of the page to be designed using this [figma link](#). To develop this we are expecting you to create a Plain Old Simple HTML site using an online editor such as [CodePen](#).

Instructions

Structuring your document

1. Cover the basic sections - header, main, footer
2. Ensure to use semantic tags to group the relevant parts of the page
3. Provide each grouping with a class attribute

Adding Multimedia to the page

In the second and third section of the page, you would need to add multimedia elements. Use your discretion for sizing. Use of width and height attribute

Video

1. Using the <video> element as shown by the play icon in the mock up, add a video.
2. **Autoplay** the video on load (ensure that it is **muted**)
3. **Loop** endlessly

Image

1. Add an appropriate image of choice as indicated by the image icon.
2. Add a **caption** for the image and it should not be the same value as the alt text.
3. Think about what container element is needed to semantically associate the image and caption (*figure and figcaption*)

Table

1. Add the provided **caption** to your table
2. Add attributes to make the row and column headers properly associated with the rows, columns, or row groups that they act as headings for. Make use of scope attribute

Links

1. The contact us link in the first section should connect to the form at the bottom of the page
2. The explore data should anchor to the table section
3. Use of links to achieve the list in the footer.
4. All the footer links use # as the value of href

Tip: Use the **id** to make the relevant section a fragment

Form

1. Use appropriate inputs for the relevant fields..
2. Ensure to associate them with their labels semantically.
3. Add suitable structural elements for separation.
4. Populate the city dropdown with **10 places** in the city you live.
5. Make all the input fields **mandatory** to complete before the form can be submitted.
6. Make the phone number field a maximum length of **11 characters**, the names a required length between **10 - 20 characters** and the textarea a maximum of **100 characters**.

Others

1. Use the <hr> for separation between sections.
2. Replace the logo text in the header with an image or emoji or svg.

Tips

- Rely on resources like mdn or w3schools to help understand the elements to use
- Rewatch classes on LMS to get context where necessary.

[SUBMISSION LINK](#) - **4th April 2026 (No class)**

PART B

Being a developer involves a lot of self learning and direction.

- Sign up on Roadmap for [Frontend developers](#) and assess where you are, come up with next steps as to what you want to learn to get to where you want to be.
- Learn About [accessibility](#)
- Revisit the HTML elements, explore the others not covered in previous lessons and play around with it.

Marking Rubric

Total Marks : 100

1. Accuracy & Completion (15 marks)

What we are looking for:

- Page matches the mockup
- All required sections are present
- Instructions followed correctly

Marking guide:

- **13–15:** Very close to mockup, complete
- **9–12:** Mostly complete with small issues
- **1–8:** Several missing parts
- **0:** Incomplete

2. Page Structure & Semantics (20 marks)

What we are looking for:

- Use of <header>, <main>, <footer>
- Page is grouped and each section has a class attribute
- Use <hr> to separate sections
- Replace the logo text in the header with an image, emoji, or SVG

Marking guide:

- **17–20:** Excellent structure, correct use of semantic elements
- **13–16:** Mostly correct with minor issues
- **1–12:** Some structure issues or missing elements
- **0:** Missing implementation

3. Multimedia Implementation (15 marks)

Video (7 marks)

What we are looking for:

- <video> element used
- Video autoplays, is muted, and loops
- Width and height used appropriately

Image (8 marks)

What we are looking for:

- Use of <figure> and <figcaption>
- Caption is different from alt text
- Appropriate image used
- Presence of width and height

Marking guide:

- **13–15:** Fully correct and semantic multimedia usage
- **9–12:** Minor issues

- **1–8:** Basic implementation
- **0:** Missing implementation

4. Table Structure (15 marks)

What we are looking for:

- Presence of caption on table
- Add attributes to ensure row and column headers are properly associated with the rows, columns, or row groups they described
- Make use of the scope attribute

Marking guide:

- **13–15:** Fully correct and well-structured
- **9–12:** Minor issues
- **1–8:** Basic table structure
- **0:** Missing implementation

5. Links & Navigation (10 marks)

What we are looking for:

- “Contact Us” CTA anchors to form section
- “Explore Data” CTA anchors to table section
- Use of ID as fragment value for the CTAs
- Footer links use <a> tags
- Footer links use # as placeholder

Marking guide:

- **9–10:** All links work correctly
- **6–8:** Minor issues
- **1–5:** Weak linking structure
- **0:** Missing implementation

6. Form Implementation & Validation (25 marks)

What we are looking for:

- Correct input types
- Labels “for” properly linked with input “id”
- Proper grouping of form elements
- Dropdown contains 10 city options

Validation rules:

1. Phone: max 11 characters
2. Name: 10–20 characters
3. Textarea: max 100 characters
4. All fields marked required

Marking guide:

- **21–25:** Fully functional, validated, and well-structured

- **16–20:** Minor issues
- **1–12:** Basic form with missing requirements
- **0:** Missing implementation
